The present invention describes a composition (1) comprising: carriers and almanostimulants, and a polypeptide (III) of a ovarian tumnour polypeptide encoded by a polymucleotide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequence (S2), a T cell population of (II), carriers are resenting cells that express (III). (1) has cytostation of carriers and cells that express (III). (1) has cytostation of (III), and comparing the sample preferably carrian cancer in a patient's biological sample preferably carrian cancer in a patient's biological sample preferably carrian cancer in a patient with (IV), detecting the amount of polynucleotide value and thereby detecting ovarian cancer in the amount to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by collaborate cancer in the patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by collaborating and/or expanding T cells specific for an ovarian tumour protein comprising contacting T cells with (III) or (III) is useful in design and preparation of Tiboxyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells; and to isolate a full length gene from a suitable library e.g., a tumour cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or I cell expressing
                                                                                                          Human; ovarian cancer; ovarian tumour; cytostatic; gene; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 343 BP; 117 A; 52 C; 50 G; 124 T; 0 U; 0 Other;
                                                               Human ovarian cancer related cDNA clone SEQ ID NO:10855
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 10855; 489pp; English

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein of the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, and an analyte in a sample, or part of the arsenic resistance operon of B. coli) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the Arsk sequence appearing as ABUGA440 binding to a mucleic acid sequence comprising oligonucleotides appearing as ACD28581. The system is useful for detecting the presence of analyte in a sample. The system is useful for detecting the presence of analyte in a sample. The presence is the bottom strand of an oligonucleotide which binds to a plasmid expressed Arsk protein and is used in the biosensor of the
                                                                                                                                                                                                                                                                                        New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                  ö
                                                                                         New Acinetobacter baumanii proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for
                                                                                                                                                                The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as coments of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents DNA encoding an A. baumannii
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a miniature inverted-repeat transposable element (MITE)-like element capable of causing duplication of a target sequence at the site of its insertion in a genomic gene. The invention is useful for causing expression of a transgene in a plant. It can also be used for inducing or regulating the expression in a plant of the gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel miniature inverted-repeat transposable element (MITE)-like element useful for constructing transgene expression cassette for stably creating genetically engineered organisms capable of expression of transgene.
                                     7.
The invention relates to an isolated mucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Miniature inverted repeat transposable element; MITE; duplication;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CPG dinuclectides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Designing primers and probes for analyzing diseases associated with cytosine methylation state e.g. arthritis, cancer, aging, arteriosclerosis comprising fragments of chemically modified genes
                                                                                                                                                                                                                                          Chemically pretreated genomic DNA associated with cell cycle #40.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6022 BP; 1478 A; 252 C; 1512 G; 2780 T; 0 U; 0 Other;

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with consultative, of genes associated with tumour empression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid oligomer (PNA) of at least 9 nucleicid and be a peptide nucleic acid oligomer (PNA) of at least 9 nucleides and may form part of a set of probes for detecting the cytosine methylation state and/or single culleotide polymorphisms and also to be used in an array for analysing diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or propiosition to specific diseases, by analysing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are diadvantageous to patients. The present sequence is one of the 533 genomic sequences derived from tumour suppressor genes and oncogenes. Note: The sequence derived from tumour suppressor genes and oncogenes. Note: The sequence for the printed specification, but the printed specification, and the printed speci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fragments of chemically modified genes associated with tumor suppressor genes and oncogenes, useful in designing primers and probes for analyzing diseases associated with cytosine methylation state e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                         /note="Vector: pBluescript II SK-, Site_I: BcoRI; Site_2: Aholf This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light. TAP medium in the dark, HS (minimal) medium in the ambient levels of CO2 and HS medium bubbled with 5% DO3 PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned and cDNA synthesized. The cDNA was directionally cloned into lambda ZAP II (Stratagene) in the BCORI (5') and XhoI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with Exassist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

AG-ND-170H24.TR ND-TAM Anopheles gambiae genomic clone
AG-ND-170H24, genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Email: bloftuestigr.org
This clone is from an A. gambiae BAC library (ND-TAM) provided by
This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
the out. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&M Universty BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
Seq primer: MI3 Rev
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Anopheles.

This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
This clone is from an A. gambiae BAC library was generated from A. gambiae PEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&W University BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
partial digest.
Seg primer: M13 Rev
Class: BAC ends.

/note="Organ: Suspensor Region of Globular-Stage Embryos, Vector: TriplEx2; Site_1: SfilA, Site_2: SfilB; Suspensor regions were micro-disgected from globular-stage embryos six days after pollination from greenhouse-grown plants [Weterings et al., Plant Cell 13, 2409-2425 (2001)]. Double-stranded CDNA was synthesized from suspensor mRNA using the SWART CDNA Library Construction Kit according to the manufacturer (Clontech). The suspensor cDNA fragments were directionally ligated into the Sil restriction site of the lambda TriplEx2 vector (Clontech), and the recombinant cDNAs were transformed into E. coli XLI-Blue cells (Clontech). Suspensor cDNA plasmids used for directional sequencing were obtained by in vivo excision from the lambda TriplEx2 recombinants in E. coli BM25.8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CA907971

209 bp mRNA linear EST 27-DEC-2002 PCSC18727 Scarlet Runner Bean Suspensor Region TriplEx2 Phaseolus coccineus cDNA 5' similar to Actin, mRNA sequence.

New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English.

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and an ArsR (encoded by part of the arisenic resistance operon of B. Coli) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the ArsR sequence appearing as ABU63440 binding to a nucleic acid

E. coli Arsk binding oligonucleotide PLASSIB

10-OCT-2003 (first entry)

ACD28589;

ö

BD.

ACD28589 standard, DNA; 21

ACD28589 ID

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein; of the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, actecting the presence of an analyte in a sample, actecting the presence of an analyte in a sample, and an Arsk (encoded by part of the arsenic resistance operon of B. coli) protein comprising an part of the arsenic existance operon of B. coli) protein comprising an into acid sequence appearing as Au63440 binding to a nucleic acid sequence appearing as Au63440 binding to a nucleic acid sequence appearing a page aring as Acossessed as Acossessed of analyte in a sample. The present sequence is the top strand of an oligonuclectide which binds to a plasmid expressed Arsk protein and is used in the biosensor of the New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample. sequence comprising oligonucleotides appearing as ACD28584-ACD28591. The system is useful for detecting the presence of analyte in a sample. The present sequence is the bottom strand of an oligonucleotide which binds to a plasmid expressed Arst protein and is used in the biosensor of the Gaps . 0 0; Indels ArsR; arsenic resistance operon; biosensor; ss; arsenic. 8; Length Sequence 28 BP; 14 A; 7 C; 2 G; 5 T; 0 U; 0 Other; Sequence 30 BP; 5 A; 2 C; 7 G; 16 T; 0 U; 0 Other; 100.0%; Score 28; DB 8; ilarity 100.0%; Pred. analyte in a sample.

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specifically binds the analyte; (2) an isolated nucleic acid containing a specifically binds the analyte in solated nucleic, and a containing a specifically by the protein; and containing the presence of the analyte. Also included are a biosensor device for detecting the presence of the analyte. Also included are a consensor device for detecting the presence of an analyte in a sample, and an Arsk (encoded by part of the arsenic resistance operon of E. coli) protein comprising an coli sequence that is at least 90% identical to amino acids 1-97 of the Arsk sequence appearing as ABG3440 binding to a nucleic acid comprising oligonucleotides appearing as ACD28584-ACD28591. The system is useful for detecting the presence of analyte in a sample. The present sequence is the bottom strand of an oligonucleotide which binds to a plasmid expressed Arsk protein and is used in the biosensor of the incompletion. ö Gaps ö Query Match

New nucleic acids or oligomers, useful for diagnosing or treating diseases associated with DNA transcription, e.g. immunological disorders, Werner syndrome, psoriasis, myocardial infarction, solid tumors or

Claim 1; SEQ ID NO 11; 32pp; English

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer that hybridises to or is identical or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation status), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary syndrome, the meantylation status), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary syndrome, the meantylation status) and sorders, mannological disorders, parametristy syndrome, cuberculosis, developmental disorders, paraments, Niemann-Pick disease, myelodysplastic syndrome, mycocardial infarction, hypertension, angiogenesis, erythropoiesis, congenital heart disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours associated genomic DNA molecules of the printed specification but associated in electronic format directly from the European Patent

```
The present invention relates to a miniature inverted-repeat transposable element (MITB)-like element capable of causing duplication of a target sequence at the site of its insertion in a genomic gene. The invention is useful for causing expression of a transgene in a plant. It can also be used for inducing or regulating the expression in a plant of the gene
                                                                                                                                                                                                                                                                                                                         Novel miniature inverted-repeat transposable element (MITE)-like element useful for constructing transgene expression cassette for stably creating genetically engineered organisms capable of expression of transgene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human genome; biallelic marker; high density disequilibrium map; genomic map; haplotype; phenotype; polymorphic base; genotyping; haplotyping; hybridisation; identification; characterisation; diagnosis; single nucleotide polymorphism; SNP; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          â
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes the full length genome of Neiseerla

meningitidis B (NMB). The sequences in AAP21544 and AAF21607 to AAF21613

crepresent fragments of the NMB genomic sequence, as the sequence was too

long to go in a record on its own it was split into 8 sequences which

coverlap each other at the beginning and end of each sequence by 49980 bp

(i.e. the last 49980 bp of AAF21544 is repeated at the beginning of

AAF21607, the last 49980 bp of AAF21589 recepted at the beginning of

AAF21608, and so onl. AAF21545 to AAF21589 co.de the beginning of

Grantiners which are used in the exemplification of the present invention.

The NMB genome and fragments from it have antibacterial activity, and can

compute antibodies which binds to the proteins can be used in compositions

conditions arised to Neisserial bacteria or as a

diagnostic reagent for detecting the presence of Neisserial bacteria or

of antibodies raised to Neisserial bacteria. Computers, computer storage medium or computer databases can be used in a search to

identify open reading frames (ORFS) or coding sequences within the NMB

genome. The DNA sequences provide flutther opposttunities to find antigenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the pharmaceutical agents acting on a disease as well as other treatment. N. B. The SEQ ID NOS 2832, 2913, 2974, 3035, 3056, 3157, 327, 3297 and 3037, are not actually given a sequence in the Sequence bisting from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour polypeptide encoded by a polymuchecide (III) having a cDNA sequence (SI) from the 10912 muchecitide sequences as given in ABL/77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II). (I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological
                                                                                                                                                                                                                                                                                                                                                                                 library using a degenerate probe based on the N-terminal amino acid sequence of the purified enzyme. The amidase is able to hydrolyse amides to carboxylates and has higher activity on ammonium adipamate than on adipamate. The enzyme is particularly useful for converting ammonium adipamate to diammonium adipate for production of nylon 6,6 or for converting 5-cyanovaleramide to 5-cyanovaleramide to 5-cyanovaleramide to 5-cyanovaleramide to 5-cyanovaleramide to 5-cyanovaleramide to 6-cyanovaleramide to 6-cyanov
                                                                                                                                                                                                                                                                                                                                                          The amidase gene was isolated from a Comamonas testosteroni genomic DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                       New amidase with greater activity on adipamate than on adipamide - a related DNA and microorganisms producing it, partic used to produce ammonium adipate or 5-cyanovalerate for nylon mfr.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or I cell expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

us-10-676-299-4.rng

sample from a patient with (IV), detecting the amount of polynucleotide hybridising to (IV) and comparing the amount to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells specific for an ovarian tunnour protein comprising contacting T cells with (III) or (II). (II) is useful in design and preparation of ribozyme molecules for inhibiting to isolate a full length gene from a suitable library e.g., a tumour colls; and library using well known techniques

fragment of chemically modified gene, useful for of diseases associated with abnormal cytosine Nucleic acid comprising diagnosis and treatment methylation.

Claim 1; SEQ ID NO 715; 32pp + Sequence Listing; German.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alz, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

Kimmerly WJ;

WPI; 2001-316495/33. P-PSDB; AAG81901. Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis.

Claim 8; Page 267; 2188pp; English.

AAH552304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (C and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. vaccination. The nucleic acids (I) wia the production of vectors containing them which are used to produce hosts cells which express the companies. The polypeptides (II) (and/or nucleic acids) may then be compared to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the AH55090 represent specifically claimed S. epidermidis and the present invention. AAH55091 to AAH55098 crepresent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polymocleotide sequences given in the sequence listing of the present specification, however the sequence of listing only aces up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4455 to 4472, no sequences are present invention in the disclosure for SEQ ID NO:4454 to even though sequences are present in the disclosure for SEQ ID NO:4454 to even though sequences are present in the disclosure for SEQ ID NO:4454 to even though sequences are present the sequence are present to the present the sequences are present the sequences are present the sequences are present the sequence are present the sequences are present the sequence are present an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 39, Application US/10204708

Patent No. 6677731

GENERAL INFORMATION:

APPLICANT: PIERENROCK, Christian

TITLE OF INVENTION: Dy Assessing DNA Methylation

FILE REPRENCES: 6013-101.2

CURRENT APPLICATION NUMBER: US/10/204,708

CURRENT PILING DATE: 2003-05-06

PRIOR PELING DATE: 2001-04-06

PRIOR PILING DATE: 2000-04-06

PRIOR PILING DATE: 2000-04-07

PRIOR PELING DATE: 2000-04-07

PRIOR PILING DATE: 2000-04-07

PRIOR PILING DATE: 2000-09-01

NUMBER OF SEQ ID NOS: 98

LENGTH: 19513

WUNDER: DATE: 2000-09-01

New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specifically binds the analyte; (3) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein, and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and the arsenic resistance operno of E. coll) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the ArsR sequence appearing as ABU63440 binding to a nucleic acid

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide (5) producing the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway is dentifying a gene required for cellular proliferation; (8) identifying a gene required for cellular proliferation; (8) identifying a gene required for cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             screening
sequence comprising oligonucleotides appearing as ACD28584-ACD28591. The system is useful for detecting the presence of analyte in a sample. The present sequence is the top strand of an oligonucleotide which binds to chromosomally expressed ArsR protein and is used in the biosensor of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zyskind JW;

or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The autisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for scallular proliferation to isolate candidate molecules for rational cury discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. pneumoniae or P. aeruginosa. The present sequence is one of the 6213 antisense sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained the electronic format directly from NIPO at the contract of the printed specification, but was obtained to the invention of the interest sequence and the contract of the printed specification and the contract of the contract o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal
                                                                                                                                                                                                                                                                                                                                                                                                                     ftp.wipo.int/pub/published_pct_sequences. useful for generating antibodies against it, detecting or quantitating a bulypeptide in tissue, as molecular weight markers and as a food supplement. [II) and its binding partners are useful in medical imaging of sites expressing (II). [I] and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensize, gene mapping, identification of mutations and to produce other types of deta and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPD at fitp.wipo.int/pub/published_pot_sequences

New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English

The invention relates to a new system (blosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of a nanlyte in a sample, detecting the presence of an analyte in a sample, and the arsenic resistance operno of B. coll) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the ArsR sequence appearing as ABU63440 binding to a nucleic acid

New system comprising isolated protein and mucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English.

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein, and specific binding sequence that is bound specifically by the protein, and to the nucleic acid in the presence of the analyte. Also included are biosensor device for detecting the presence of an analyte in a sample, to the presence of an analyte in a sample, and an Arsk (encoded by part of the arsenic resistance operon of E. coli) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the Arsk sequence appearing as ABUG3440 binding to a nucleic acid sequence comprising oligonucleotides appearing as ACD28581. The system is useful for detecting the presence of analyte in a sample. The system is useful for detecting the presence of analyte in a sample. The compressed Arsk protein and is used in the biosensor of the invention

```
The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to caid sequences from mouse and human (ADA01482-ADA03094), and to crecombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically compared to the protein, and a blockip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism companic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proving that cancer incidence is a direct consequence of the effects of proving that cancer incidence is a cortinoma (especially breast cancer, prostate cancer, lymphoma or carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular traspeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed murine CA nucleic acid sequence of the printed present of the printed sequence data for this patent with the printed specification, but was obtained in election of the printed specification, but was obtained the invention of the printed specification, but was obtained to the printed or the printed specification, but was obtained the printed presents and the printed specification, but was obtained to the printed specification, but was obtained to the printed specification, but was obtained to the printed specification and the printed specification and the sequence of the printed sequence of the printed sequence o
      The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a consensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and an Arsk (encoded by part of the arsenic resistance operon of E. coli) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the Arsk sequence appearing as ABG3440 binding to a nucleic acid sequence comprising oligonucleotides appearing as ACD28584-ACD28591. The system is useful for detecting the presence of analyte in a sample. The present sequence is the top strand of an oligonucleotide which binds to a chromosomally expressed Arsk protein and is used in the biosensor of the

The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 600 sequences fully defined in the specification. A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleis acids and polymptices are useful for treating carcinomas, e.g. lymphomas, cancers, neopleam, adenocarcinoma, and sarcommas. The present sequence represents a mouse gene of the invention.
                                                                                                                                                                                                                                                                                                                                                   New recombinant nucleic acid, useful for treating carcinomas, lymphomas, cancers, neoplasm, adenocarcinoma, or sarcomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

ğ New recombinant nucleic acid comprising a nucleotide sequence of ar the carcinoma-associated (CA) genes, useful for screening for drug candidates for diagnosing or treating carcinomas.

Claim 1; SEQ ID NO 229; 983pp; English.

The invention relates to a recombinant nucleic acid comprising a nucleotide sequence selected from any of the fully defined carcinoma-associated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical fungs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-BB12017). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insectionses, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB77372). The sequence date for this parent ind not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16179-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                      The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to serien for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in anti-Listeria vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp, who, int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibacterial, Listeria, food contamination, mutational analysis; infection, ds.

The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to sorten for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in anti-Listeria vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                        New genomic sequences from Listeria species, useful for detection, treatment and prevention of infection, also related polypeptides, antibodies and modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 8148 BP; 2408 A; 1730 C; 1229 G; 2781 T; 0 U; 0 Other;

/note="Vector: pBluescript II SK+; Site 1: EcoRI; Site 2:
XhoI; The cDNA library was constructed from mRNA isolated
from differentiating somatic embryos cultered on MSM6AC.
The library was prepared using the Stratagene pBluescript
II SK(+) library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dI) sequence with an XhoI restriction site. EcoRI
adaptors were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
directionally cloned into the BCORI-XhOI restriction site
of the pBluescript vector. The ligated cDNA fragments
were transformed into E.coli ElectroMax DHIOB host cells.
Tissue culture and library construction were performed by
Francoise Thipaud-Missen and Anu Khana (Lila Vodkin lab,
University of Illinois)."

Xhol; This cDNA library was constructed from mRNA isolated from immarure flowers of field grown plants. The cDNA library was prepared using the Stratagene pBluescript IX R library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a Xhol using a primer consisting of a poly Xhol digestion. The cDNA fragments were directionally cloned into the Broak fragments were directionally cloned into the Broak. The ligated cDNA fragments were pBluescript vector. The ligated cDNA fragments were transformed into XilO-Gold host cells. This library was constructed by Dr. Randy Shoemaker and Dr. John Erpelding."

from young pods. The 5' ESTS of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were erracked to form library Gm-r1070. The cDNA clones of the reracked Gm-r1070 library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Updates 1 to 640)

GM700023A20B3 Gm-r1070 Glycine max cDNA clone Gm-r1070-8886 3',
p1468916. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a kNoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by KNoI digestion. The cDNA fragments were directionally cloned into the EcoRI-xhoI restriction site of the pBluescript vector. The ligated coNA fragments were transformed into DH10B host cells (GibcoBRI). This library was constructed in the laboratory of Dr. Randy Shoemaker."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;

the laboratory of Ernest Retzel, Center for Computational Genomics and Bloinformatics, University of Minnesota, http://www.bc.umn.edu/ResearchProjects/Soybean/index.html. Reracking was performed by Genome Systems, St. Louis, http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Runctional Genomics, University of Illinois, thtp://www.life.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Gm-11070 library is listed in the 'OTHER BST' field. The detailed information on the source library for each clone can also be obstained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."

/note="Vector: pwD42nv; Purified genomic DNA from M. nusculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oilgonicleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AF129072.1) a copy-number inducible derivative of plasming R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CG197578 16.6_1.0_KB Zea mays genomic clone ZMMBTa0681H21,

New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English.

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and the areanic resistance operan of E. coli) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1-97 of the ArsR sequence appearing as ABU63440 binding to a nucleic acid

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated noticel caid containing a specifically binds the analyte; (2) an isolated noticel caid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and an ArsR (encoded by part of the arsenic resistance operon of B. coli) protein comprising an anino acid sequence appearing as Aud3440 binding to a nucleic acid sequence appearing as Aud3440 binding to a nucleic acid sequence appearing oligonucleotides appearing as Aud28884-ACD28891. The system is useful for detecting the presence of analyte in a sample. The present sequence is the top strand of an oligonucleotide which binds to a change of the presence of the biosensor of the
                                                                                                                                                                                                                                                                                                                                                                                                                        ö
sequence comprising oligonucleotides appearing as ACD28584-ACD28591. The system is useful for detecting the presence of analyze in a sample. The present sequence is the bottom strand of an oligonucleotide which binds to a chromosomally expressed Arsk protein and is used in the biosensor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US2003096275-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-MAY-2003,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ACD28586;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Laing LG;
```

Antisense; ss; prokaryotic essential gene; cell proliferation; Prokaryotic essential gene antisense oligonucleotide #3339.

```
The invention relates to an isolated nucleic acid comprising any one of the first antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an arbibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway or equired for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound,'s activity; (11) a culture comprising strains in which the gene or compound, activity; (11) a culture comprising strains in which the gene or compound of an organism. The antisense nucleic acids required computed in oversuperssed or underexpresses (12) determining the extent or collection of an organism. The antisense nucleic acids required for proliferation of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for homologous nucleic acids are acided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated mucleic acid containing a specifically binds sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein; or to the nucleic acid in the presence of the analyte. Also included are a blosensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and an Arsk (encoded by part of the arsenic resistance operon of B. coli) protein comprising an an least 90% identical to anno acids 1-97 of the Arsk sequence appearing as ABUG3440 binding to a nucleic acid sequence comprising oligonucleotides appearing as ACD28584-ACD28591. The system is useful for detecting the presence of analyte in a sample. The present sequence is the bottom strand of an oligonucleotide which binds to a chromosomaliy expressed Arsk protein and is used in the biosensor of the invention

The invention relates to isolated polynucleotide (1) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in disponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the present in ABN15762 to ABN157252 encode the human ORFX concerns given in ABP0010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder. In humans, and in the manufacture of a medicament for treating a squance associated with ORFX-associated disorder. ORFX polymucleotide squances can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperpoliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disorders related to organ stransplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disorders, infectious storage disease, various immune deficiencies and disorders; infectious disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also cusful for treating burns, infections, uncers, for treating osteoporosis, bone degenerative disorders, or periodomial disease, and for gut protection or regeneration and treatment of lung or liver fibrosis. The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABLi6175) and the encoded proteins (ABB57737-ABB77072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           melanogaster expressed polynucleotide SEQ ID NO 29930.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical dargs. The invention discloses genomic DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL01875) and the encoded proteins (ABB57737-ABB77737). The sequence data for this parent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eutaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL0180-ABL36511), expressed DNA sequences (ABL0180-ABL36511), expressed DNA proportion, but was obtained in electronic form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid teukaemias, Alzheimer's disease, Alzheipepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; immune system disease; cytosine methylation; antiasthmatic; antianaemic; cytosine static; nootropic; antianaemic; cytostatic; nootropic; antianaemic; antianamico; antianamico; anticonvulsant; ophthalmologica; antirtheumatic; antiarthritic; antidiabetic; antipsoriatic; antiinfammatory; cancer; eye disease; arteriosofalorsis; anamia; artificationatics; and antinflammatory; cancer; eye disease; Allos; epilepsy; acute myeloid leukaemia; Alzheimer's disease; Allos; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fragment of chemically modified gene, useful for of diseases associated with abnormal cytosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIN16176-ABIN10311), expressed DNA agequences (ABIN1840-ABIN1775) and the encoded proteins (ABBS7737-ABBN2072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format direct from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 19082 BP; 5097 A; 429 C; 4336 G; 9220 T; 0 U; 0 Other;

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma an macular degeneration, arreriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/gublished_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

Claim 1; SEQ ID NO 42697; 21pp + Sequence Listing; English.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABLi6176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

The library was prepared using the Stratagene pBluescript
II SK(+) library construction Xit. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with an XhoI restriction site. EcoRI
adaptors were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
followed by XhoI digestion. The cDNA fragments
followed by Storiction site of the pBluescript vector. The ligated cDNA fragments
were transformed into the Booll-MDO restriction site
of the pBluescript vector. The ligated cDNA fragments
were transformed into E.coli ElectroMax DH10B host cells.
Tissue culture and library construction were performed by
Francoise Thibaud-Nissen and Anu Khana (Lila Vodkin lab,

/clone lib="Mouse loky plasmid UUGCIM library"
/note="Wowlston" PWD42nv; Purified genomic DNA from M.
musculus C57BL/GU (male) was obtained from the Jackson
laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114 gip Afall23072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to

New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English.

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of a nanalyte in a sample, detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and the arsenic resistance operno of a contain comprising an amino acid sequence that is at least 90% identical to amino acids: 1-97 of the ArsR sequence appearing as ABU63440 binding to a nucleic acid

screening New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. WPI; 2003-029926/02

Claim 1; SEQ ID NO 3339; 1766pp; English

The invention relates to an isolated nucleic acid comprising any one of the foll antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid containing the vector; (3) an isolated containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation, (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity, (1) a culture comprising strains in which extent to which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for the product is proliferation of an organism or for solate candidate molecules for required for callular proliferation of the strains or screening for homologous nucleic acids required for the processed or the solate candidate molecules for required for the processed or product molecules for proliferation of an organism. The antisense nucleic acids required for the processed or product and processed or product and processed or product molecules and an organism or the product is acceening for homologous nucleic acids required for the product of the processed drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aurens, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the 6213 antisense sequences of the invention. Note: The sequence data for this action not form part of the printed specification, but was obtained in electronic format directly from NIPO at fight. Wipo. int/pub/published\_pct\_sequences.  The invention relates to isolated polymucleotide (1) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PKR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. AbS64197-AAS94564 represent novel human diagnostic coding sequences. AbS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the invention.

The invention relates to identifying a stress condition to which a plant replaced been exposed, comprising: (a) contacting nucleic acid array been exposed, comprising: (a) contacting nucleic acid array or probes representative of the plant cell genome; and (b) array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abject stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ1195-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is
 not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

 The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disporders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheijepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
 for
neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene;
 Nucleic acid comprising fragment of chemically modified gene, useful f
diagnosis and treatment of diseases associated with abnormal cytosine
methylation.

The invention relates to novel genes (ABA11004-ABA21334) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genes are isolated from a range of human tissues disclosed in the genes are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, cardiovascular disorders such as myocardial ischaemias; (d) wound healing (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
 Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

New system comprising isolated protein and nucleic acid, and a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte, useful for detecting the presence of analyte in a sample.

Claim 35; Page 15; 36pp; English.

The invention relates to a new system (biosensor) for detecting the presence of analyte in a sample comprising: (1) an isolated protein that specifically binds the analyte; (2) an isolated nucleic acid containing a specific binding sequence that is bound specifically by the protein; and (3) a detection system that indicates a change in binding of the protein to the nucleic acid in the presence of the analyte. Also included are a biosensor device for detecting the presence of an analyte in a sample, detecting the presence of an analyte in a sample, and the areance resistance operon of E. coil) protein comprising an amino acid sequence that is at least 90% identical to amino acids 1970 of the ArsR sequence appearing as ABUG3440 binding to a nucleic acid

 ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABB77960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibits. S. epidermidis infections. The sequence dara for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site

The specification describes a nucleic acid construct for transforming a cativated in cells of propagating material for a plant, operatively cativated in cells of propagating material for a plant, operatively linked to a nucleotide sequence whose transcription leads to an alteration in the levels of polyamines produced in the transformed cells. The construct is useful for altering the levels of polyamines in a construct are useful for altering the levels of polyamines in a construct are useful in foodstuffs, pharmaceutical preparations, the construct are useful in foodstuffs, pharmaceutical preparations carried form these plants are useful for the manufacture of a medicament carried plants are useful for the manufacture of a medicament carried plants are useful for the manufacture of a medicament or prophylaxis of hyperproliferative diseases, in tritable bowel syndrome and diamine/polyamine oxidase deficiency, normal healing, post-operational recovery, liver regeneration, kidney compensatory growth of the lung or gut and for supporting growth in babies and young children, human immunodeficiency virus (HIV).

The construct of the present sequence represents a high molecular weight companinin promoter, which is used in constructs of the invention
 Novel nucleic acid construct for transforming a plant cell, comprises a selectively activated promoter, operatively linked to a nucleotide sequence whose transcription leads to altered polyamine levels.
 Promoter; polyamine; transgenic plant; foodstuff; cancer; trauma; nutritional formulation, hyperproliferative disease; Hodgkin's disease; psoriasis; ulcerative colitis; irritable bowel syndrome; healing; post-operational recovery; liver regeneration; kidney hypertrophy; sepsis; transfusion; laminin box; ss.

The amidase gene was isolated from a Comamonas testosteroni genomic DNA library using a degenerate probe based on the N-terminal amino acid sequence of the purified enzyme. The amidase is able to hydrolyse amides to carboxylates and has higher activity on ammonium adipmate than on adippamide. The enzyme is particularly useful for converting ammonium adipame to diammonium adipate for production of nylon 6,6 or for converting 5-cyanovaleramide to 5-cyanovalerate (an intermediate for caprolactam used to make nylon-6). (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-OCT-2003 to standardise OS field)

 The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF28514). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinustiis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis

AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at postition 24 of their nucleotide sequences. AAZ69599 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention

```
The present invention describes a composition (1) comprising: carriers and immunostimulants; and a polypeptide (11) of a cvarian tumour perspected encoded by a polymelectide (111) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II). (1) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contexting a biological sample from a patient with (IV), detecting the amount of polynucleotide hybridising to (IV) and comparing the amount to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the amount of polynucleotide hybridising (IV) is detected preferably by polymerase chain reaction (PCR). (1) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells specific for an ovarian
 ö
have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from the pharmaceutical about a disease as well as other treatment. N.B. The SEQ ID NOS 2852, 2913, 2974, 3035, 3096, 3157, 3227, and 3367, are not actually given a sequence in the Sequence Listing from the
